

Brian Hurd is Associate Professor of Agricultural Economics and Agricultural Business at New Mexico State University, where he conducts research and teaches on the interactions of economies and natural resources. His primary area of research focuses on the effects and interactions of weather and climate on economic, community, and environmental systems, particularly as they relate to water and agriculture. Recognized for his research on the impacts of climate variability and change on water and agricultural resources, he has lectured, published, and provided guidance on these topics both nationally and internationally. He received a BA degree in Economics and in Environmental Conservation from CU Boulder, and MS and PhD degrees in Agricultural Economics from UC Davis.
