

**Craig W. Thomas** is an Associate Professor in the Daniel J. Evans School of Public Affairs at the University of Washington, where he teaches graduate courses on environmental management, public-sector performance, policy-making processes, and research methods. He is the author of two books on environmental management that describe, explain, and evaluate collaboration as an alternative form of governance to centralized planning and regulation. *Bureaucratic Landscapes: Interagency Cooperation and the Preservation of Biodiversity* (MIT Press, 2003) explores the individual motivations of state and federal officials in working cooperatively across jurisdictions on biodiversity issues in California. He also co-authored *Collaborative Environmental Management: What Roles for Government?* (RFF Press, 2004), which explores the diverse roles government actors play in fostering and impeding collaboration on environmental issues. He is currently working on a new project examining environmental performance systems in local, state, and federal agencies. He has also published articles on public trust in government agencies, public-sector reorganization, and habitat conservation planning. He holds a doctorate in Political Science and a Masters of Public Policy from the University of California, Berkeley. His dissertation received the American Political Science Association's Leonard White award, given annually for the best dissertation in the field of public administration. In January 2009, he will become the editor of the *Journal of Public Administration Research and Theory*, the top-ranked peer-reviewed journal of public affairs.
